Other Specific Goals

Unbundling Strategies

- In order to encourage increased participation and the sustainable growth of the small business sector, the unbundling of larger projects into smaller, more manageable, contracts is encouraged.
- Unbundling must however be considered in the context of:
 - ✓ economies of scale being lost;
 - ✓ abortive work becoming necessary;

- ✓ additional demands (not only financial) being placed on the municipality's resources; and
- the risk of later phases not being completed as a result of budget cuts becoming necessary in the future.
- Unbundling, and all of its associated implications, must therefore be carefully considered at the planning stage of any project and the budgets for, and design thereof, should be structured accordingly.
- It is important to note that while it is the municipality's policy to procure goods, services or construction works in the smallest practicable quantities, the practice of parcelling such procurement in order to avoid complying with the requirements of the different range of procurement processes described in this policy is not permitted.

Increasing Employment Opportunities

- One of the municipality's key socio-economic objectives is to facilitate the creation of employment for the people of Dr. Kenneth Kaunda District Municipality.
- Increasing employment opportunities through procurement may be achieved by specifying labour intensive technologies and/or methods of construction in the bid documents.
- It is up to Responsible Agents to thoroughly investigate the options available in the above regard, to evaluate the positive versus negative impact of any proposals, and to specify labour intensive technologies and/or methods where appropriate.

Targeted Labour and/or Targeted Enterprises

- The targeting of labour and/or enterprises from specific areas within the boundaries of the Municipal area may be achieved, where appropriate, by specifying in the bid documents, a minimum level of participation (a contract participation goal) that must be achieved in respect of targeted labour and/or targeted enterprises in the performance of the contract.

- Specified contract participation goals must be measurable and achievable, and the performance in respect of which must be monitored by the Responsible Agents during the execution of the contract.
- Where a minimum contract participation goal has been specified in respect of targeted labour and/or enterprises, the contractor is obliged to meet that goal, and must be penalised if he or she does not.
- Contract participation goals in respect of targeted labour and/or enterprises may not be introduced into the preference point system used for the evaluation of bids.

12.23 Unsolicited bids

- (1) The Municipality is not obliged to consider any unsolicited bids received outside a normal bidding process.
- (2) The Municipality may only consider an unsolicited bid if:
 - (a) the product or service offered in terms of the bid is a demonstrably or proven unique innovative concept;
 - (b) the product or service will be exceptionally beneficial to, or have exceptional cost advantages for the Municipality;
 - (c) the person or entity who made the bid is the devia provider of the product or service; and
 - (d) the reasons for not going through the normal bidding processes are found to be sound by the Municipal Manager.
- (3) Where the Municipal Manager decides to consider an unsolicited bid that complies with sub-paragraph (2) above, the Municipality must make its decision public in accordance with section 21A of the MSA, together with:
 - (a) its reasons as to why the bid should not be open to other competitors;

- (b) an explanation of the potential benefits for the Municipality were it to accept the unsolicited bid; and
 - (c) an invitation to the public or other potential suppliers to submit their written comments within 30 (thirty) days of the notice.
- (4) Once the Municipality has received written comments pursuant to subparagraph (3) above, it must submit such comments, including any responses from the unsolicited bidder, to the National Treasury and the relevant Provincial Treasury for comment.
- (5) The Municipality's adjudication committee must consider the unsolicited bid and may award the bid or make a recommendation to the Municipal Manager, depending on its delegations.
- (6) A meeting of the adjudication committee to consider an unsolicited bid must be open to the public.
- (7) When considering the matter, the adjudication committee must take into account:
 - (a) any comments submitted by the public; and
 - (b) any written comments and recommendations of the National Treasury or the relevant Provincial Treasury.
- (8) Where any recommendations of the National Treasury or Provincial Treasury are rejected or not followed, the Municipal Manager must submit to the Auditor General, the relevant Provincial Treasury and the National Treasury the reasons for rejecting or not following those recommendations.
- (9) Such submission must be made within 7 (seven) days after the decision on the award of the unsolicited bid is taken, but no contract committing the Municipality to the bid may be entered into or signed within 30 (thirty) days of the submission.

13. LOGISTICS MANAGEMENT

PART C

STANDARD FOR INFRASTRUCTURE PROCUREMENT AND DELIVERY MANAGEMENT

INTRODUCTION

Public infrastructure

South African citizens are surrounded by public infrastructure. Offices and facilities provide places of work for officials. Schools, hospitals and clinics provide essential services. Roads and railways not only enable travel, but also distribute goods and services. Border posts, harbours and airports are the physical links with neighbouring countries and the world. Dams provide water for human consumption and agricultural and industrial purposes. Networks deliver water and electricity to consumers and convey industrial effluent, soil water and wastewater to treatment works. Such infrastructure is foundational to a better life for all. However, investment in economic infrastructure will not necessarily lead to economic growth. Infrastructure which provides improvements or efficiencies in services, production or export capabilities, and which is delivered and maintained in a manner that minimises waste of materials, time and effort in order to generate the maximum possible amount of value, is most likely to contribute to economic growth.

Infrastructure is required by the state and state-owned businesses to deliver services to citizens. Each organ of state has a legislated mandate. Some organs of state generate revenue but require capital to expand their revenue generating services, while other are totally reliant on funding from the fiscus to satisfy their infrastructure needs. The fiscal has limited financial resources to fund infrastructure projects. New infrastructure projects need to be budgeted for, taking into account future operation and maintenance costs and current commitments. Accordingly, organs of state requiring funds for infrastructure projects compete for budget allocations. Projects need to be prioritized both within an organ of state and between organs of state. Such prioritisation is sometimes based on political prerogatives while at other times it is based on objective decision-making criteria, which take into account factors such as overarching government wide, long and medium-term policies and plans, including integrated sector plans and mandates.

The time taken between the submission of a project proposal and a final decision by an organ of state to implement a project can, depending upon the nature, complexity and size of a project and requirements for statutory approvals, take several years. Funding may also be required to develop project proposals so that informed decisions can be made regarding their implementation. In the first

instance, initiation reports need to be developed to outline the business case. Should funding be made available to progress the proposal, a prefeasibility report is required on major capital projects to determine whether or not it is worthwhile to proceed to the feasibility stage where sufficient information is presented to enable a final decision to be made regarding the implementation of a project. On smaller projects of a routine nature, a strategic brief is required to brief the professional team so that they can develop a viable and integrated concept for the project. A final decision to proceed to implementation is based on a concept report.

The initiation reports and feasibility reports on major capital projects, above a threshold, other than those initiated by municipalities, require cabinet or executive council approval. This enables the inputs of other organs of state in the national and provincial spheres of government who may have competing projects, or projects which may be negatively impacted by the diversion of funds to such large projects, to make their inputs in the project approval process. Projects which are categorised as strategic integrated projects are given priority in planning, the obtaining of statutory approvals and implementation by the Presidential Coordinating Commission.

Procurement and supply chain management reform

The South African Planning Commission's National Development Plan 2030: *Our future – make it work* proposes that the following five areas be focused on in designing a procurement system that is better able to deliver value for money, while minimising the scope for corruption:

- differentiate between the different types of procurement which pose different challenges and require different skills sets;
- adopt a strategic approach to procurement above the project level to balance competing objectives and priorities rather than viewing each project in isolation;
- build relationships of trust and understanding with the private sector;
- develop professional supply chain management capacity through training and accreditation; and
- incorporate oversight functions to assess value for money.

National Treasury's 2015 Public Sector Supply Chain Management Review expresses the view that supply chain management (SCM) is one of the key mechanisms enabling government to implement policy which traditionally has been misunderstood and undervalued. This Review, which identified the need for SCM reform, suggests that if such reforms are implemented as envisaged in

terms of section 217 of the Constitution, the benefits will be enormous, namely that:

- good-quality service delivery will be increasingly possible, with significant improvements in the welfare of South Africa's citizens, and especially the poor who rely heavily on government for support;
- the economy will grow as economic infrastructure is expanded and efficiently maintained;
- goods, services and infrastructure will be bought at lower costs;
- innovation will result in different approaches to the commodities used in some sectors; and
- for suppliers, the cost of doing business with the state should decrease substantially.

Public procurement that is unrelated to infrastructure delivery typically relates to goods and services that are standard, well-defined and readily scoped and specified. Once purchased, goods invariably need to be taken into storage prior to being issued for use. Services are most often of a routine and repetitive nature with well understood interim and final deliverables which do not require strategic inputs or require decisions to be made regarding the fitness for purpose of the service outputs.

In contrast, procurement relating to the provision of new infrastructure or the rehabilitation, refurbishment or alteration of existing infrastructure covers a wide and diverse range of goods and services, which are required to provide or alter the condition of immovable assets on a site. Accordingly, the procurement process for the delivery of infrastructure involves the initial and subsequent recurring updating of planning processes at a portfolio level flowing out of an assessment of public sector service delivery requirements or business needs. Thereafter it involves planning at a project level, and the procurement and management of a network of suppliers, including subcontractors, to produce a product on a site. There is no need to store and issue materials or equipment unless these are issued to employees responsible for the maintenance or operation of infrastructure, or are issued free of charge to contractors for incorporation into the works.

Infrastructure delivery is the combination of all planning, technical, administrative and managerial actions associated with the construction, supply, refurbishment, rehabilitation, alteration, maintenance, operation or disposal of infrastructure.

There is an urgent need to separate supply chain management requirements for general goods and services from those for infrastructure delivery in order to improve project outcomes.

Government's Infrastructure Delivery Management System

Government's Infrastructure Delivery Management System (IDMS) comprises three core systems, namely, a planning and budgeting, a supply chain management and an asset management system, all of which have forward and backward linkages. These core systems are located within portfolio, programme and project management, and operation and maintenance processes. Collectively these processes and systems, together with a performance management system, establish the institutional system for infrastructure delivery as indicated in the following sketch.

The Infrastructure Delivery Management System

The IDMS is supported by legislation and performance monitoring. It has a strong focus on the effective and efficient functioning of the supply chain management system.

Standard for Infrastructure Procurement and Delivery Management

This Standard for Infrastructure Procurement and Delivery Management (SIPDM) covers the supply chain management system for infrastructure delivery. It has been framed around the five focus areas proposed by the National Planning Commission for the design of a procurement system and draws upon the work of the 2015 Public Sector Supply Chain Management Review. It is issued as an instruction in terms of Section 76(4)(c) of the Public Finance Management Act of 1999 (Act No.1 of 1999) and is applicable to the following organs of state:

- a) a national or provincial department as defined in the Public Finance Management Act;
- b) a constitutional institution entity as listed in schedule 1 of the Public Finance Management Act;
- c) a public entity as listed in schedules 2 and 3 of the Public Finance Management Act of 1999; and
- d) any organ of state which implements infrastructure delivery projects on behalf of another organ of state.

This standard also forms an integral part of the Model SCM Policy for Infrastructure Delivery Management which has been issued as a Treasury guideline determining a standard for municipal supply chain management policies in terms of Section 168 of the Municipal Finance Management Act of 2003 (Act No. 56 of 2003) in support of Regulation 3(2) of the Supply Chain Management Regulations. Accordingly, the standard applies to a municipality or municipal entity whose council or board of directors, respectively, adopts the aforementioned guideline standard.

Underlying this standard is the notion that the effective and efficient functioning of the supply chain management system for the procurement and delivery of infrastructure will realise value for money and good-quality service delivery. Value for money may be regarded as the optimal use of resources to achieve the intended outcomes. Underlying value for money is an explicit commitment to ensure that the best results possible are obtained from the money spent, or maximum benefit is derived from the resources available. It is about striking the balance between the three “E’s”, namely, economy, efficiency and effectiveness, whilst being mindful of a fourth “E” – equity– as indicated in the diagram below.

The critical starting point in delivering value for money through infrastructure projects is, in the first instance, to align such projects with strategic objectives, priorities, budgets and plans, and thereafter, during the planning phase, to clearly define objectives and expected outcomes, as well as parameters such as the timelines, cost and levels of uncertainty. This frames the value-for-money proposition that needs to be implemented at the point in time that a decision is taken to proceed with a project, i.e. it establishes “economy” and identifies “equity”. The end point is to compare the projected outcomes against the actual outcomes, i.e. to confirm the “effectiveness” of the project in delivering value for money.

Implementation sits between “economy” and “effectiveness” in the results chain framework. It needs to be executed “efficiently” in order to minimise time delays, scope creep and unproductive costs, and to mitigate the effects of uncertainty on objectives so as to maintain the value-for-money proposition formulated at the outset of the project. This necessitates that the implementer of an infrastructure project exercises due care and reasonableness during implementation. Failure to do so may result in substandard or unacceptable performance, which results in a gap between intended and achieved outcomes. This gap puts value for money for a project at risk and may result in unintended consequences, such as community instability and unrest.

Organs of state which are required to implement this standard need to establish a suitable supply chain management policy for infrastructure procurement and delivery management in order to do so.

1 SCOPE

1.1.1 This standard establishes a supply chain management system for infrastructure procurement and delivery management by organs of state which are subject to the Public Finance Management Act, the Local Government: Municipal Finance Management Act, or which implement infrastructure projects on behalf of another organ of state in terms of section 238 of the Constitution of the Republic of South Africa, 1996. This standard:

a) provides a control framework for the planning, design and execution of infrastructure projects, the tracking of such projects and the monitoring of performance which:

- 1) enables risks to be proactively managed;
- 2) is capable of being audited;
- 3) is aimed at ensuring that any infrastructure acquired or to be acquired:

- is in accordance with the legal mandates and strategic priorities;
- is delivered in the right quantity and quality, and at the right place and time;
- is financially, economically and technically viable and offers value for money over its life cycle;
- is affordable in terms of existing budget and future budgetary projections after taking into account life cycle costs;
- is acquired in accordance with any required statutory permissions;
- makes optimal utilisation of existing infrastructure as demand patterns change over time;
- can be readily and economically maintained; and
- is aligned between those who design and construct infrastructure, and those who subsequently occupy, use and manage the infrastructure;

b) provides a control framework for infrastructure procurement;

c) establishes requirements for the following matters as applied to infrastructure procurement and delivery management:

- institutional arrangements;
- demand management;
- acquisition management;
- contract management;
- logistics management;
- disposal management;
- reporting of supply chain management information;
- regular assessment of supply chain management performance;
- risk management and internal control; and

d) establishes minimum requirements for infrastructure procurement.

1.2 This standard facilitates the allocation of clear responsibilities for performing activities and making decisions at gates.

1.3 The standard does not apply to:

- a) the storage of goods and equipment, following their delivery to an organ of state, which are stored and issued to contractors or to employees of that organ of state;
- b) the disposal or letting of land;
- c) the conclusion of any form of land availability agreement;
- d) the leasing or rental of moveable assets;
- e) public private partnerships; and
- f) the provision of municipal services by means of external mechanisms referred to in Chapter 8 of the Municipal Systems Act.

1.4 The standard includes the procurement of goods and services necessary for a new facility, as delivered to be occupied and used as a functional entity.

4 CONTROL FRAMEWORKS

4.1 Control framework for infrastructure delivery management

4.1.1 General

4.1.1.1 The control framework for the management of infrastructure delivery shall comprise the applicable stages and gates as set out in Figure 1 and the key deliverables described in Table 1. Stages 3 to 9 may be omitted where the required work does not involve the provision of new infrastructure or the rehabilitation, refurbishment or alteration of existing infrastructure. Stages 5 and 6 may be omitted if sufficient information to proceed to stage 7 is contained in the stage 4 deliverable. Decisions to proceed to the next stage shall at each gate, subject to the provisions of 4.1.1.2, be based on the acceptability or approval of the end-of-stage deliverable.

4.1.1.2 A stage shall only be complete when the deliverable has been approved or accepted by the person or persons designated in the institutional arrangements to do so. Activities associated with stages 5 to 9 may be undertaken in parallel or series, provided that each stage is completed in sequence.

4.1.1.3 The level of detail contained in a deliverable associated with the end of each stage shall be sufficient to enable informed decisions to be made to proceed to the next stage. In the case of stages 3 to 6, such detail shall, in addition, be sufficient to form the basis of the scope of work for taking the package forward in terms of the selected contracting strategy.

4.1.1.4 Prefeasibility and feasibility reports shall be required as end-of-stage deliverables for stages 3 and 4, respectively, where one or more of the following applies:

- a) the major capital project is required for:
 - 1) a major public enterprise where the total project capital expenditure exceeds R1,5 billion; or
 - 2) an organ of state subject to the Municipal Finance Management Act other than a major public enterprise where the total project capital expenditure exceeds R1,0 billion including VAT, or where the expenditure per year for a minimum of three years exceeds R250 million per annum including VAT;
- b) the project is not:
 - 1) a building project with or without related site works; or
 - 2) a process-based, somewhat repetitive or relatively standardized project where the risk of failing to achieve time, cost and quality objectives is relatively low; or
- c) the organ of state's infrastructure procurement and delivery supply chain management policy requires that prefeasibility and feasibility reports be produced during stages 3 and 4 respectively.

4.1.1.5 Stages 3 and 4 shall be repeated for each package if the acceptance at stage 4 is for the acceptance of a project comprising a number of packages which are to be delivered over time.

 - 5) contracts where the approval has been granted to increase the total of the prices or the time for completion at Procurement Gate 8D (see Figure 2 and Table 3).

12 ASSESSMENT OF SUPPLY CHAIN MANAGEMENT PERFORMANCE

An annual performance report shall be prepared for each portfolio of projects involving infrastructure delivery within two months of the financial year end which reflects performance in relation to at least the following:

- a) expenditure incurred in infrastructure delivery for the financial year, against the budget made available to cover such expenditure at the start of the year;
- b) the average variance between planned and achieved completion of stages of all packages and projects;
- c) an overview of all packages where stage 7 was completed within the financial year and the total of the prices and the time for completion at the start of the contract or when the order was issued exceed 20%, together with a brief explanation as to why such increases occurred;
- d) the average time taken to award a contract, measured from the closing date for tender submission or the final submission made in terms of a proposal or competitive negotiations procedure to a decision being taken to award the contract;

- e) the average time taken, in respect of all packages covered in the report, to complete stage 8 measured from the time that stage 7 is completed;
- f) the average difference between the total of the prices in the payment certificate that was issued following the completion of stage 7, and the total of the prices at the end of stage 9;
- g) the average time taken to award a contract above the threshold for quotations, measured from the closing date for tender submission or the final submission made in terms of a proposal or competitive negotiations procedure, to the acceptance of the tender evaluation report; and
- h) the average number of days that payment is later than that required under the terms of a contract.

13 RISK MANAGEMENT AND INTERNAL CONTROL

13.1 Risk management

13.1.1 Risk registers shall be established and maintained to enable risk mitigation relating to infrastructure procurement and delivery management to be proactively managed at a portfolio, programme, project and contract level. Such registers shall as a minimum contain:

- a) The entry date of the risk;
- b) A description of the risk, i.e. risk event, cause and possible outcome;
- c) The measures and action to mitigate risk, i.e. a description of the action, responsibility for action and timetable for implementation;
- d) Action status, i.e. actioned, take no action, monitor and review or to be actioned.

13.1.2 Those responsible for establishing and maintaining risk registers shall issue risk reports when called upon to do so.

13.2 Internal control measures

13.2.1 The gates in the control frameworks provided in section 4 shall be used, as appropriate, to:

- a) authorise the proceeding with an activity within a process, or commencing with the next process;
- b) confirm conformity with requirements; or

- c) provide information which creates an opportunity for corrective action to be taken.

13.2.2 Suitable templates shall be used to record the approval or acceptance of documents at the gates provided in the control framework established in section 4.

14 INFRASTRUCTURE PROCUREMENT REQUIREMENTS

14.1 General

14.1.1 Procurement shall be undertaken in accordance with all applicable legislation and;

- a) the relevant requirements of SANS 10845-1, SANS 10845-2, SANS 10845-3 and SANS 10845-4;
- b) the administrative procedures embedded in the approved standard forms of contract identified in this standard; and
- c) the provisions of this standard.

14.1.2 All contracts that are entered into with contractors following a procurement process shall be in writing.

14.1.3 Quality may be evaluated in tender submissions as other objective criteria as provided for in the Preferential Procurement Policy Framework Act in accordance with the provisions of SANS 10845-1.

14.1.4 The preference points system contained in the Preferential Procurement Policy Framework Act shall not be applied to disposals. An assumption shall be made in the case of tenders for framework agreements that the 90:10 preference points system applies.

14.1.5 All awards above the quotation threshold in competitive selection and competitive negotiation procurement processes shall be published at least on:

- a) the organ of state's or relevant treasury's website; or
- b) if required in terms of the Construction Industry Development Board Act, on the Construction Industry Development Board's website.

14.1.6 The publication of the award of a contract shall contain at least the following information:

- a) contract numbers and title;

- b) a brief description of goods, services or works; and
- c) the names of successful tenderers and their B-BBEE status level of contribution, and where practical, the total of the prices at award, the duration of the contract and the tender points scored during the tender evaluation process.

14.2 Usage of standard procedures

14.2.1 Goods or services or a combination thereof should generally be procured from the open market. Tenders may, however, be solicited from a confined market where:

- a) it is established with reasonable certainty that:
 - 1) only a sole contractor is able to provide the goods or services or any combination thereof;
 - 2) only a very limited number of contractors are able to provide goods, services or works which are not freely available in the market, or which are provided solely for the organ of state in accordance with unique requirements;
- b) there is justification for standardizing goods or making use of manufacturer-accredited service providers;
- c) a change in product or manufacturer requires modifications to related equipment and fixtures, e.g. a replacement pump requires costly changes to mountings, pipework or electrical connections or the replacement of circuit breakers requires costly changes to mounting frames, face panels, bus bars, wiring and the like; or
- d) a replacement model requires the holding of additional spares or maintenance personnel.

14.2.2 The standard procurement procedures identified in Table 8 shall be implemented under the stated conditions in accordance with the provisions of SANS 10845-1. Projects shall not be subdivided to reduce the estimated tender value to fall within a threshold applicable to a specific procurement procedure.

Table 8: Conditions under which procedures provided for in SANS 10845-1 may be utilized

Procedure	Conditions which need to be satisfied in order to utilise the procedure	
Competitive selection procedure		
Nominated procedure	Any procurement, the estimated value of which does not exceed a threshold stated in Table 9.	
Open procedure	Any procurement, except where the cost of advertising or the evaluation of a large number of tender submissions is disproportionate to the value of the work.	
Qualified procedure	Any procurement where: 1) a contract requires for its execution a high degree of specialized input, or requires skills and expertise that are not readily available; 2) a contract requires for its execution exceptional management skills or quality; 3) a tender submission requires significant tenderer inputs in order to respond appropriately to requirements so that a financial offer may be determined; 4) it is desirable, in a large programme or project, to link packages of work to tenderers who have the appropriate capacity and capability to compete against one another; 5) the time and cost required to examine and evaluate a large number of tender offers would be disproportionate to the procurement; 6) for practical reasons, it is necessary to limit the number of tender submissions that are received; or 7) the goods or services are not freely available in the market, or are manufactured solely for the organ of state in accordance with that organ of state's own specifications.	
Quotation procedure	Any procurement where the estimated value does not exceed a threshold stated in Table 9.	
Proposal procedure using the two envelope system	Services where tenderers are required to develop and price proposals to satisfy a broad scope of work.	
Proposal procedure using the two-stage system	Option 1	Any procurement in which tenderers are required to submit technical proposals and, if required, cost parameters around which a contract may be negotiated.
	Option 2	Any procurement in which tenderers are invited to submit technical proposals in the first stage and to submit tender offers based on procurement documents issued during the second stage.
Shopping procedure	Procurement which involves readily available goods and does not exceed the threshold value stated in Table 9.	
Restricted competitive negotiations	As for open competitive negotiations, but where: 1) a contract requires for its execution a high degree of specialized input, or requires skills and expertise that are not readily available; 2) a contract requires for its execution exceptional management skills or quality; 3) a tender submission requires significant tenderer inputs in order to respond appropriately to requirements so that a financial offer may be determined; 4) the time and cost required to examine and evaluate a large number of tender offers would be disproportionate to the procurement; 5) for practical reasons, it is necessary to limit the number of tender submissions that are received; or 6) a target price is tendered and finalized prior to the award of the contract.	
Procedure	Conditions which need to be satisfied in order to utilize procedure	
Open competitive negotiations	Any procurement where:	

	1) it is not feasible to formulate detailed specifications for the work or to identify the characteristics of goods or works to obtain the most satisfactory solution to procurement needs; 2) there are various possible means of satisfying procurement needs; 3) the technical character of the goods or works, or the nature of the services, warrants the use of competitive negotiations to realise the most satisfactory solution to procurement needs; 4) the purpose of the contract is research, experimentation, study or development; or 5) all the tenders received in a competitive selection procedure are non-responsive and the calling for fresh tenders is likely to result in a similar outcome.
Negotiated procedure	Any procurement where: 1) a rapid response is required due to the presence of, or the imminent risk of, an extreme or emergency situation arising from: a) human injury or death; b) human suffering or deprivation of human rights; c) serious damage to property or financial loss; d) livestock or animal injury, suffering or death; e) serious environmental damage or degradation; or f) interruption of essential services; 2) the required goods, services or works cannot technically or economically be separated from another contract previously performed by a specific contractor; 3) only one contractor has been identified as possessing the necessary experience and qualifications or product to deliver value for money in relation to a particular need; 4) the services, goods or works do not exceed a threshold value stated in Table 9; 5) the service or works being procured are largely identical to work previously executed by that contractor and it is not in the interest of the public or the organ of state to solicit other tender offers; 6) a professional service contract does not exceed a threshold value stated in Table 9 and but can be based on time and proven cost; 7) the nature of the works, goods or services, or the risks attached thereto, do not permit prior overall pricing; or 8) only one responsive tender is received.

14.2.3 Prior approval shall be obtained for the following procurement procedures, unless such a procedure is already provided for in the approved procurement strategy:

- a) the negotiated procedure above the thresholds identified in Tables 8 and 9; and
- b) the approaching of a confined market, except where a rapid response is required in the presence of, or the imminent risk of, an extreme or emergency situation arising from the conditions set out in Table 8, and which can be dealt with, or the risks relating thereto arrested, within 48 hours.

14.2.4 Only a person authorized in terms of a policy developed in accordance with the provisions of section 5 may pursue a negotiated procedure in an emergency without the prior approval permitted in terms of 14.2.3.

14.2.5 Approval for the use of a confined market shall only be valid for a period not exceeding 18 months.

Table 9: Procurement thresholds

Procedure (see Table 8 and SANS 10845-1)	Conditions which need to be satisfied in order to utilize the procedure	Threshold (Rand including VAT)

14.3 Framework agreements

14.3.1 Framework agreements may be entered into with contractors by:

- a) inviting tender offers to enter into a suitable contract for the required work, using stringent eligibility and evaluation criteria to ensure that contracts are entered into with only those contractors who have the capability and capacity to provide the required goods, services or works; and

- b) entering into a limited number of contracts based on the projected demand and geographic location for such goods, services or works.

14.3.2 The term of a framework agreement shall not exceed:

- a) three years in the case of all organs of state other than a major public entity, a national government business enterprise or a provincial government business enterprise; or
- b) four years in the case of a major public entity, a national government business enterprise or provincial government business enterprise.

14.3.3 Framework agreements that are entered into shall not commit an organ of state to any quantum of work beyond the first order, or bind the employer to make use of such agreements to meet its needs.

The employer may approach the market for goods or services, or a combination thereof, whenever it considers that better value in terms of time, cost and the quality which may be obtained.

14.3.4 Orders:

- a) shall cover only goods or services, or any combination thereof, falling within the scope of work associated with the agreement which may not be amended for the duration of the contract;
- b) may not be issued after the expiry of the term of the framework agreement; and
- c) may be completed even if the completion of the order is after the expiry of the term.

14.3.5 The issuing of orders with a number of framework contractors covering the same scope of work may be made with and without requiring competition amongst framework contractors. Where competition is required amongst framework contractors, it shall be conducted in a non-discriminatory manner such that competition is not distorted.

14.3.6 Competition amongst framework contractors for orders shall take place where:

- a) there is no justifiable reason for issuing an order to a particular framework contractor, such as:
 - 1) the framework contractor provided the most economical transaction when the financial parameters included in the contract are applied, and has the capacity to deliver;

- 2) the required goods, services or works cannot technically or economically be separated from another contract or order previously performed by a specific contractor;
 - 3) the service or works being instructed are largely identical to work previously executed by that contractor;
 - 4) the value of the order is less than the threshold for the quotation procedure;
 - 5) the schedule for delivery necessitates that each of the framework contractors be issued with orders on a continuous basis; or
 - 6) capacity to execute the order;
- b) the terms in the framework agreement are insufficiently precise or complete to cover the particular requirement, e.g. delivery time scales or time estimates to complete the order (productivity); or
- c) a better quality of service can be obtained through a competitive process.

14.4 Design competitions

- 14.4.1** A single- or two-stage design competition may be used as a means to identify one or more suitable contractors to provide design services. The conditions for a design competition shall clearly state the purpose of the competition and the intentions of the promoter, the nature of the problem that is to be solved and all the practical requirements to be met by the competitors.
- 14.4.2** A design competition shall be initiated following a call for an expression of interest. All respondents who satisfy the admission requirements for a design competition and complete an application form shall be admitted to the competition as participants.
- 14.4.3** A jury who is independent of participants in the competition shall be appointed to collectively decide on the outcome of the competition. Such a jury shall be autonomous in its decisions or opinions and endeavour, adopt decisions on each individual submission by consensus and record its decisions in writing. Not less than 50% of the members serving on the jury shall have relevant professional qualifications in the subject matter of the competition.
- 14.4.4** The design competition shall be conducted in such a manner that the identity of any particular participant during the process is not known to the jury until after competition winners are announced. The awarding of prizes and honoraria may be linked to such competitions.

- 14.4.5** A contract may be negotiated with the winner of the design competition. Where more than one contract is awarded to participants in a design competition, all competitors in the final stage of the competition shall be invited to submit tender offers. Tender offers shall be evaluated in terms of method 4 of SANS 10845-3, with the score for quality being based solely on the ranking of the competition jury.

14.5 Procurement documentation

14.5.1 General

- 14.5.1.1** Procurement documents shall be developed in accordance with the provisions of SANS 10845-1 and SANS 10845-2 and, where aspects of the national register of contractors or register of projects established in terms of the Construction Industry Development Board Act are implemented through procurement documents, the CIDB Standard for Uniformity in Construction Procurement.
- 14.5.1.2** The Form of Offer and Acceptance contained in Annex B of SANS 10845-2 shall be used, with minimal contract-specific amendments, to form the basis of agreement arising from the solicitation of tender offers.
- 14.5.1.3** The formation of a contract in the single volume approach (see SANS 10845-2) shall occur once:
- a) the schedule of deviations has been completed to reflect each and every amendment to the tender documents:
 - 1) made in terms of addenda issued prior to the close of tenders; and
 - 2) permitted in terms of the conditions of tender, and agreed to in the process of offer and acceptance; and
 - b) the acceptance portion of the Form of Offer and Acceptance has been signed by the person authorized to do so.
- 14.5.1.4** The formation of the contract in the three-volume approach (see SANS 10845-2) shall take place after:
- a) each and every amendment to the tender documents made in terms of addenda issued prior to the close of tenders, and those permitted in terms of the conditions of tender and agreed to in the process of offer and acceptance have been incorporated into the final contract;

- b) a brief summary of the changes made in the final contract document is included in the schedule of deviations so as to allow the reader to understand the nature and extent of the changes; and
- c) the acceptance portion of the Form of Offer and Acceptance has been signed by the person authorized to do so.

14.5.1.5 A tenderer's covering letter shall not be included in the final contract document or referenced in the schedule of deviations. The agreed provisions of such a letter shall be stated in the schedule of deviations.

14.5.1.6 Standard returnable documents for infrastructure procurement contained in annexures A to E shall, where appropriate, form part of the Returnable Documents in procurement documents.

14.5.1.7 Standard documentation issued by a relevant treasury for non-infrastructure procurement shall not be included in infrastructure procurement documents unless they are found to be compatible, and not in conflict with the provisions of a procurement document which complies with the provisions of this standard.

14.5.2 Tender, submission and auction data

14.5.2.1 The tender data shall reference the Standard Conditions of Tender contained in SANS 10845-3.

14.5.2.2 The tender offer validity period provided for in the tender data shall generally not exceed eight weeks, and in exceptional circumstances shall not exceed 12 weeks.

14.5.2.3 The tender data associated with Method 3 (financial offer and preference) shall be as follows:

5.11.4	The procedure for the evaluation of responsive tenders is Method 3. The financial offer will be scored using the following formula: $A = \frac{(1 - (P - P_m))}{P_m}$ The value of W1 is: 1) 90 where the financial value, inclusive of VAT, of all responsive tenders received has a value in excess of R1 000 000; or 2) 80 where the financial value, inclusive of VAT, of one or more responsive tender offers has a value that equals or is less than R1 000 000. Up to 100 minus W1 tender evaluation points will be awarded to tenderers who complete the preferencing schedule and who are found to be eligible for the preference claimed.
--------	--

14.5.2.4 The tender data associated with Method 4 (financial offer, quality and preferences) shall be as follows:

5.11.5	The procedure for the evaluation of responsive tenders is Method 4. The total number of tender evaluation points (TEV) shall be determined in accordance with the following formula: $TEV = f_1 (NFO + NP) + f_2 NQ$ where f_1 and f_2 are fractions, f_1 equals 1 minus f_2 and f_2 equals NFO is the number of tender evaluation points awarded for the financial offer made in accordance with 5.11.7 where the score for financial offer is calculated using the following formula $A = (1 - (P - P_m))$ ----- P_m and W_1 equals: 1) 90 where the financial value, inclusive of VAT, of all responsive tenders received has a value in excess of R1 000 000; or 2) 80 where the financial value, inclusive of VAT, of one or more responsive tender offers have a value that equals or is less than R1 000 000. NP is the number of tender evaluation points awarded for preferences claimed in accordance with the Preferencing Schedule. NQ is the number of tender evaluation points awarded for quality offered in accordance with 5.11.9 where $W_2 = 100$. Up to 100 minus W_1 tender evaluation points will be awarded to tenderers who complete the preferencing schedule and who are found to be eligible for the preference claimed.
--------	---

14.5.2.5 The submission data shall reference the Standard Conditions for the Calling for Expressions of Interest contained in SANS 10845-4.

14.5.2.6 Auction data shall be based on the auction data contained in SANS 10845-1.

14.5.3.1 The standard forms of contract shall be selected from, and be suitable for use under the conditions described in Table 10.

14.5.3.2 The standard forms of contract shall be used with minimal contract amendments which do not change their intended usage and shall only be amended when absolutely necessary to accommodate special needs.

14.5.3.3 Adjudication shall be used to resolve disputes arising during the performance of a contract prior to proceeding to either arbitration or litigation.
